

ABSTRACT OF THE DISCLOSURE

A light-emitting apparatus of the present invention includes: a first electrode formed on an insulating surface; a first insulating layer covering an end portion of the first electrode and having a tapered edge; a second insulating layer formed on the first electrode and the first insulating layer and formed of one kind or a plurality of kinds selected from the group consisting of silicon oxide, silicon nitride, and silicon oxynitride; an organic compound layer formed on the second insulating layer; and a second electrode formed on the organic compound layer.
